

Bhavesh Jagtap

DevOps Engineer

+91-8591102112 bhavesh.jagtap1011@gmail.com linkedin.com/in/bhavesh-j10 Mumbai, India

Summary

Results-oriented DevOps Engineer with hands-on experience designing automated deployment pipelines, managing cloud infrastructure on AWS, and optimizing system workflows. Proficient in Python, Linux, Docker, and CI/CD methodologies, with a proven track record of reducing manual operational overhead and improving system reliability. Adept at monitoring large-scale systems and leveraging Infrastructure as Code to streamline mission-critical application deployments.

Experience

IT Engineer

Kanthwal Services (Co Vanderlande Logistics)
Mumbai International Airport, India

July 2025 – Present

- **Data Automation:** Scripted Python tools to automate the collection and analysis of system logs, significantly reducing the manual data processing effort.
- **Cloud Infrastructure:** Configured and monitored AWS resources for log storage and backup automation, ensuring data integrity for mission-critical applications.
- **Deployment Pipelines:** Assisted in setting up CI/CD pipelines (GitHub Actions) and Docker environments to streamline the deployment of internal data dashboards.

Financial Market Analyst Intern

Futures First
Hyderabad, India

Jan 2024 – Jul 2024

- **Algorithm Development:** Developed and implemented algorithms for market trend analysis using Python and SQL, resulting in a 15% improvement in forecast accuracy.
- **Large-Scale Data Analysis:** Analyzed complex datasets that exceed 10M+ records using Machine Learning techniques to identify patterns and reduce risk-related losses by 20%.
- **Statistical Modeling:** Utilized predictive modeling to interpret market fluctuations and provide actionable business insights.

Key Achievements

Cloud Observability & Automation

- Developed Python automation and integrated AWS CloudWatch to monitor system logs, enhancing real-time observability and significantly reducing manual operational toil.

CI/CD Pipeline Engineering

- Architected continuous Integration and deployment (CI/CD) pipelines utilizing GitHub Actions, Jenkins, and Docker to drastically accelerate deployment lifecycles.

Cloud Infrastructure & Reliability

- Configured and managed AWS cloud resources (EC2, S3, IAM) for secure storage and automated backups, ensuring high availability for mission-critical applications.

Deployment Efficiency

- Streamlined infrastructure management by leveraging containerization and automation, resulting in highly efficient and reproducible build steps for development teams.

Projects

Internal Dashboard Deployment & Automation Tools

- Built CI/CD pipeline using Git, GitHub Actions, Docker, and Linux.
- Automated code pull, build, and deployment processes for monitoring dashboards.

IT Infrastructure Monitoring & Log Analysis

- Developed Python scripts integrated with AWS CloudWatch.
- Generated performance reports and insights on system resource utilization.

Technical Skills

- **Programming Languages:** Python, Bash, SQL
- **Databases & Data Processing:** MongoDB, NumPy, Pandas
- **Cloud Platforms:** AWS (EC2, IAM, S3, CloudWatch), Linux Server Administration
- **CI/CD, Containerization & Orchestration:** Git, GitHub Actions, Docker, Kubernetes, Jenkins
- **Automation & IaC:** Shell Scripting, Ansible, Terraform

Education

B.Tech in Computer Science and Engineering Indian Institute of Information Technology, Pune GPA: 7.53 / 10	2020 – 2024
HSC DG Ruparel College of Arts, Science, and Commerce Percentage: 66.1%	2018 – 2020
SSC Anuyog Vidyalaya Percentage: 90.8%	2008 – 2018
